Un automa a stati finiti deterministici (DFA) e' rappresentato da una quintupia (Q, E, 8, 90, F):

- · Q e' l'insieme degli stati
- · D e' l'alfabeto
- · 8: Q×∑ → Q è la funt. di Transitione
- · que a è la stata iniziale
- · F = Q è l'insieme degli <u>stati</u> finali

es. Automa che accetta il linguaggio L = { x01y: x,y ∈ {0,1}\*}

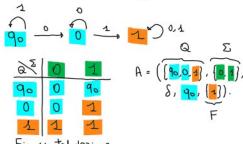

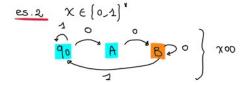

Fig. 1: tabulazione della funz. di Transizione 8.

es.4 X = {0-1}

es.4 
$$\chi \in \{0,1\}^*$$
